

Practical Course on Graph Visualization

Introduction

SUMMER SEMESTER 2014/2015

Tamara Mchedlidze – Martin Nöllenburg

VS

Organization

Instructors

- Tamara Mchedlidze
- `mched@iti.uka.de`
- Office 307

- Martin Nöllenburg
- `noellenburg@kit.edu`
- Office 319

Class meetings

- Tuesday 11:30 - 13:00
- Room SR301
- Detailed plan of meetings on the webpage

Organization

Web-page

<http://www.iti.uni-karlsruhe.de/teaching/sommer2015/graphvis/>

Information on the web-page

- Meeting dates (subject to change)
- Deadlines and goals
- Literature and reading material (...)

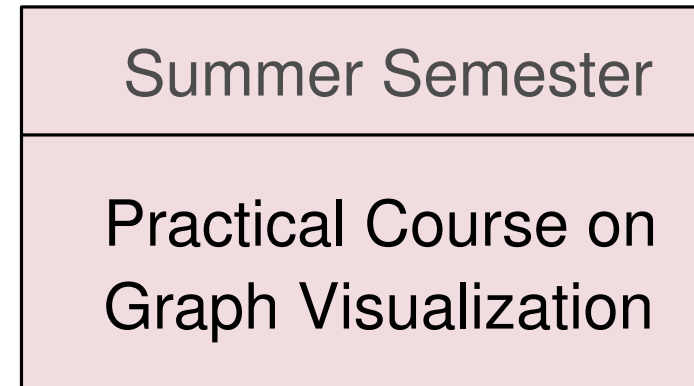

Practical Course on Graph Visualization

- Practical course is part of the module Theory and Practice of Graph Visualization (IN4INGTP)
- Module consists of the theory lecture (5 credits) and the practical course (5 credits)

Practical Course on Graph Visualization

Learning outcome

- Deepen knowledge in Graph Visualization
- Concentrate on a particular topic
- Read, understand and apply scientific publications
- Adapt and combine existing algorithms
- Design new solutions - exact or heuristical

Learning outcome

- Implementation and evaluation of the developed solutions
- Create and manage a complex software project
- Work in a team

Motivating Goal

- Participation in Graph Drawing contest
- Holds during *23rd International Symposium on Graph Drawing and Network Visualization* - September 24-26
- For more info: <http://www.csun.edu/gd2015/>

Practical Course on Graph Visualization

Time Requirements _____ 5LP = 150h

Practical Course on Graph Visualization

Time Requirements _____ **5LP = 150h**

■ Class meetings _____ 10h

■ Literature reserach _____ 30h

■ Presentation and Documentation _____ 10h

Schedule

April 14 (today) _____ Organization and Introduction to the topic
Search, read and understand related work

Schedule

April 14 (today) _____ Organization and Introduction to the topic

Search, read and understand related work

April 21 _____ Discussion of the found work

Search, read and understand related work

Schedule

- April 14 (today) _____ Organization and Introduction to the topic
Search, read and understand related work
- April 21 _____ Discussion of the found work
Search, read and understand related work
- April 28 _____ Discussion of the found work, Distribution of topics
Detailed study, preparation of presentations

Schedule

April 14 (today)	_____	Organization and Introduction to the topic Search, read and understand related work
April 21	_____	Discussion of the found work Search, read and understand related work
April 28	_____	Discussion of the found work, Distribution of topics Detailed study, preparation of presentations
May 12	_____	Presentations Develop approaches

Schedule

April 14 (today)	_____	Organization and Introduction to the topic Search, read and understand related work
April 21	_____	Discussion of the found work Search, read and understand related work
April 28	_____	Discussion of the found work, Distribution of topics Detailed study, preparation of presentations
May 12	_____	Presentations Develop approaches
May 26	_____	Discuss approaches Develop structure of the software

Schedule

April 14 (today)	_____	Organization and Introduction to the topic Search, read and understand related work
April 21	_____	Discussion of the found work Search, read and understand related work
April 28	_____	Discussion of the found work, Distribution of topics Detailed study, preparation of presentations
May 12	_____	Presentations Develop approaches
May 26	_____	Discuss approaches Develop structure of the software
June 2	_____	Discuss structure of the software Implementation - Testing

Schedule

April 14 (today)	_____	Organization and Introduction to the topic Search, read and understand related work
April 21	_____	Discussion of the found work Search, read and understand related work
April 28	_____	Discussion of the found work, Distribution of topics Detailed study, preparation of presentations
May 12	_____	Presentations Develop approaches
May 26	_____	Discuss approaches Develop structure of the software
June 2	_____	Discuss structure of the software Implementation - Testing
June 16	_____	Questions Implementation - Testing (<u>till July 1</u>) - Presentation preparation

Schedule

April 14 (today)	_____	Organization and Introduction to the topic Search, read and understand related work
April 21	_____	Discussion of the found work Search, read and understand related work
April 28	_____	Discussion of the found work, Distribution of topics Detailed study, preparation of presentations
May 12	_____	Presentations Develop approaches
May 26	_____	Discuss approaches Develop structure of the software
June 2	_____	Discuss structure of the software Implementation - Testing
June 16	_____	Questions Implementation - Testing (<u>till July 1</u>) - Presentation preparation
July 7	_____	Final Presentations Software-final issues, Documentation
July 14	_____	Submit the software and the documentation

Grading

Scheme

- Successful completion of the project - 70%
- Final presentation - 20%
- Written documentation - 10%

Grading

Scheme

- Successful completion of the project - 70%
- Final presentation - 20%
- Written documentation - 10%

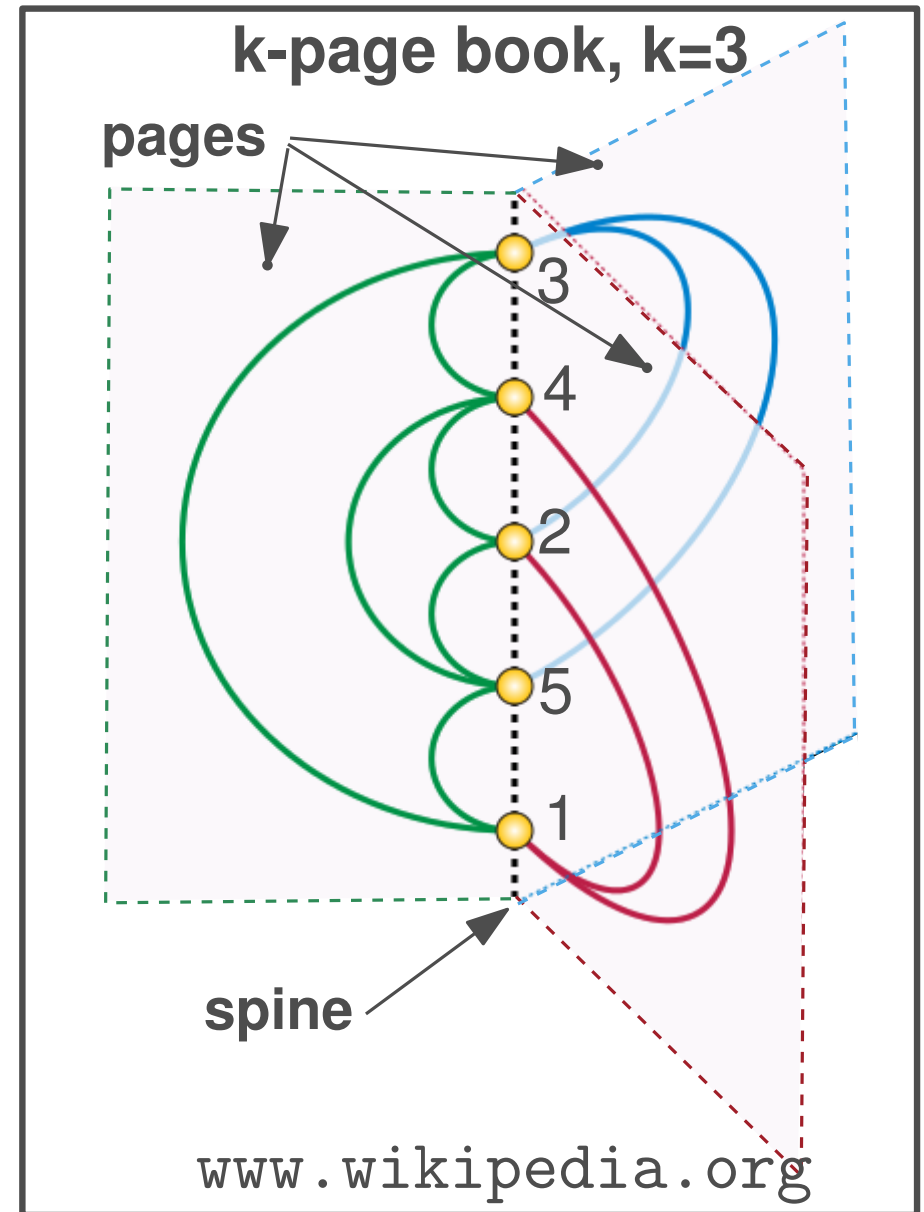

Successful completion of the project

- Be present and active on meetings
- Contribute to literature search
- Contribute to discussions
- Contribute to coding
- Quality of the software
- Validity of the solution (all constraints are met)
- What if you do not ... ?

Crossing Minimization in Book Embedding

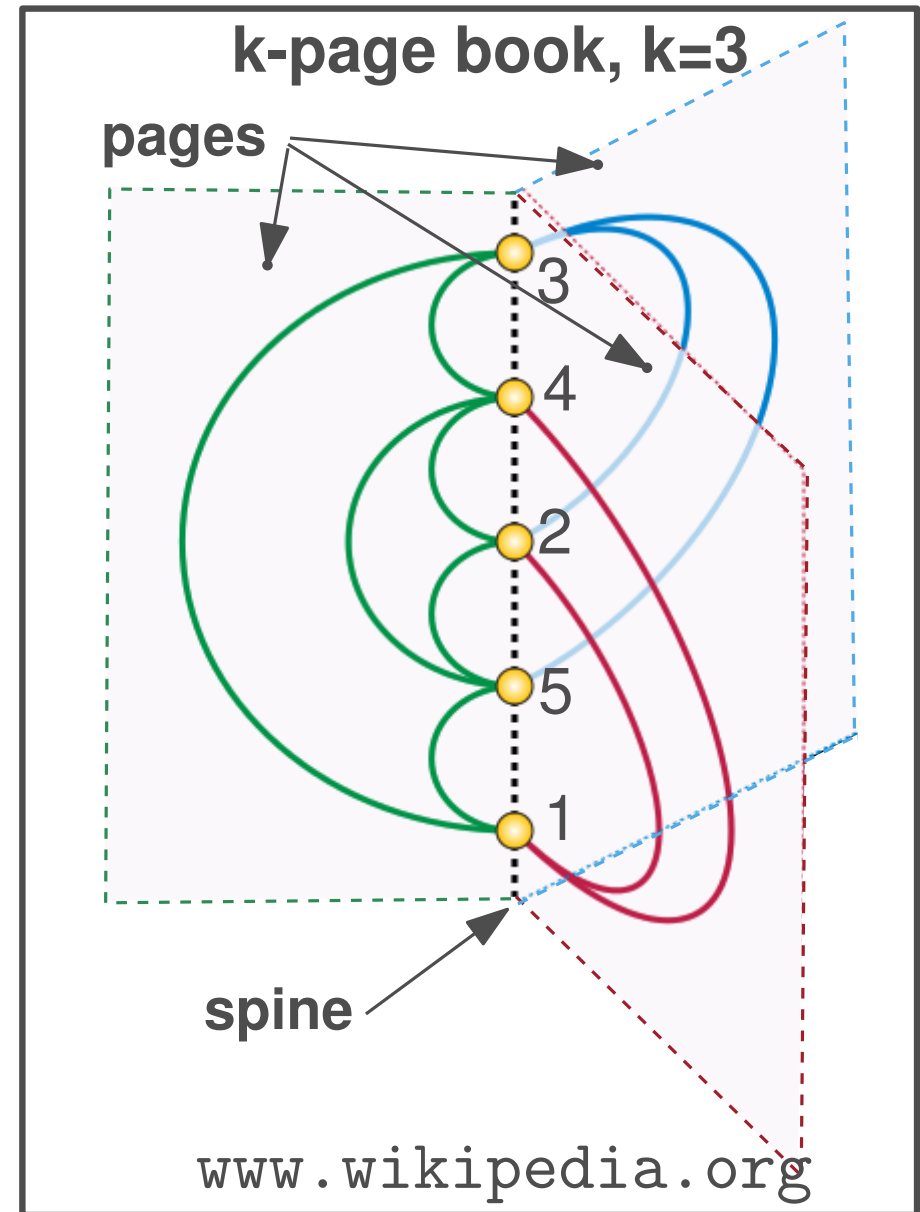

Introduction

Book Embedding

Introduction

Book Embedding

Introduction

Book Embedding

Can I always get a crossing-free drawing?

Introduction

Book Embedding

Can I always get a crossing-free drawing?

Obviously, not!

Introduction

Book Embedding

Can I always get a crossing-free drawing?

Obviously, not!

Crossing Minimization in Book Embedding:

Given: Graph G and an integer $k > 0$

Introduction

Book Embedding

Can I always get a crossing-free drawing?

Obviously, not!

Crossing Minimization in Book Embedding:

Given: Graph G and an integer $k > 0$

Find: A k -page book embedding with minimum number of crossings

Introduction

Book Embedding

Can I always get a crossing-free drawing?

Obviously, not!

Crossing Minimization in Book Embedding:

Given: Graph G and an integer $k > 0$

Find: A k -page book embedding with minimum number of crossings

- Find a permutation of the nodes on the spine
- Find an assignment of the edges to the pages
- So that the total number of crossings is minimized

Examples

■ $k=2$

■ $k=3$

Examples

- $k=2$ Two crossings?
- $k=3$

Examples

- $k=2$ Two crossings?
- $k=3$ One crossing?

Input (and Output) format

Lines starting with # are comments and ignored

First value is the number of nodes (N)

6

Second value is the number of pages (K)

2

Next N numbers describe a permutation of the nodes as they occur along the spine.

0

1

...

Remaining lines are the edges.

The first value is the source node.

The second value is the target node.

The third value is enclosed in rectangular brackets and describes the page to which that edge is assigned.

0 1 [1] # Edge between Node 0 and Node 1 on page 1

0 3 [0] # Edge between Node 0 and Node 3 on page 0

...

Literature Study

- Summarize the key results (usually found in the abstract and introduction)

Literature Study

- Summarize the key results (usually found in the abstract and introduction)
- Are these results immediately relevant to our problem of crossing minimization in book embeddings?

Literature Study

- Summarize the key results (usually found in the abstract and introduction)
- Are these results immediately relevant to our problem of crossing minimization in book embeddings?
- **If no:** continue with the next paper. **If yes:** get overview of the methods and detailed content. Send us a link to the paper.

Literature Study

- Summarize the key results (usually found in the abstract and introduction)
- Are these results immediately relevant to our problem of crossing minimization in book embeddings?
- **If no:** continue with the next paper. **If yes:** get overview of the methods and detailed content. Send us a link to the paper.
- Do the results give theoretical insight into the problem, e.g., lower/upper bounds, computational complexity etc?

Literature Study

- **If no:** continue with the next paper. **If yes:** get overview of the method, its complexity, its advantages and disadvantages.
- Do **To be discussed in the class meeting** lower/upper bounds, computational complexity etc.:
- Is there a constant **So...keep notes!** it a purely existential result?
- Is this method or parts of it implementable (even if with worse asymptotic complexity)? **Do not forget to send us a link.**
- Is it tailored for book embeddings, fixed vertex order etc? Can it be generalized?

Literature Study

- How to start?

Literature Study

- **How to start?**
- Use Google Scholar!

Literature Study

- **How to start?**
- Use Google Scholar!
- **What to google for?**

Literature Study

- **How to start?**
- Use Google Scholar!
- **What to google for?**

crossing minimization in k -page book embedding
 k -page crossing number

- How to start?
- Use Google Scholar!
- What to google for?

Related problem: **Book thickness of a graph**

Given: A graph G

Find: Minimum $k > 0$, so that G has a k -page book embedding with zero crossings

Literature Study

- **How to start?**
- Use Google Scholar!
- **What to google for?**

Identical terms:

Planar k -book embedding = k -stack layout

Book thickness = pagenumber, stacknumber

$k \leq 2$: Book embedding = arc diagram, circular layout

- **How to start?**
- Use Google Scholar!
- **What to google for?**

Testing whether there exists a planar 2-page book embedding **is equivalent to** testing whether the graph is **Planar Subhamiltonian**

Given: A planar graph G

Question: Can we add edges to G to make it hamiltonian without destroying the planarity

- **How to start?**
- Use Google Scholar!
- **What to google for?**

Testing whether there exists a planar 2-page book embedding **is equivalent to** testing whether the graph is **Planar Subhamiltonian**

Given: A planar graph G

Question: Can we add edges to G to make it hamiltonian without destroying the planarity

\mathcal{NP} -complete
